

# WIRELESS WIDE AREA PROGRESSIVE

**Wireless Table Linking**  
**Multiple Reserve Jackpots**  
**Realtime Push Information**

Real Link™ is an extremely secure wireless progressive jackpot management system that links and manages multiple casino locations to a single shared table game progressive jackpot that seamlessly integrates with DEQ's G3™ table game progressives.

There is no additional cost in hardware to buy or infrastructure to add to your current wireless network as Real Link uses standard internet protocols and existing infrastructure between all the G3 systems that you have throughout all your properties.

## CUTTING EDGE WIDE AREA PROGRESSIVE FOR TABLE GAME TECHNOLOGY

In the modern world, connectivity is the key. Real Link will instantly bring your table games to an efficiency and profitability never before achievable by traditionally non-linked table games. Why keep your individual tables isolated on a single casino floor? Connect them to larger jackpots to drive players to your tables. In other words, Real Link will give your casino new and increased revenue opportunities streams without having to add more tables or personnel to your floor.

### REAL LINK SYSTEM FEATURES

- State of the art progressive jackpot management with 2 Reserve Jackpots.
- Jackpot pays out the jackpot prize at the table while keeping all other tables operational.
- Unlimited scalability.
- Real Link has the ability to offer 2 complete separate progressive jackpots.
- No special hardware required, communication protocol based on an approved encryption to be used on existing TCP-IP and wireless infrastructure.
- Advanced reporting with precision performance metrics.
- Remote Access System for monitoring and reporting.
- Extended information and alert system to remotely monitor the system through email.
- Possibility to integrate with automated surveillance systems.

### DYNAMIC REPORTS

Real Link will store all transaction and accounting information enabling you to generate an extensive range of reports for your system-wide or localized operation. You can access all reports at any time to get an accurate, real time picture of your performance. Make your everyday decisions based on the best data available!

### SECURE COMMUNICATIONS

Managing large jackpots across multiple properties is serious business and Real Link is your tool of choice for this task. Jackpot adjustments are seamless with Real Link and no money is transacted through the Internet. The DEQ methodology offers a very secure and simple way of managing all your progressive jackpot transactions at a distance. Every Real Link server simply communicates with its peers in "realtime" to inform them of prize payouts. Real Link uses widely adopted network communication techniques and United States NSA algorithms to prevent hacking or data tampering.

### LINKING MULTIPLE TABLES

Higher jackpots attract more participation which means that your tables will be more profitable. The more table games that are linked together, the higher and the faster the Jackpot will grow.

### EMAIL ALERTS

Real Link includes extensive text (SMS) and email messaging capabilities. Real Link can be customized to send alerts, informative messages or even to send reports automatically to configured addressees. Stay informed in real time of the status of your tables, payouts and issues as well as increase your IT team's response time so that any technical issue can be addressed in real time.

### RUGGED AND RELIABLE

Real Link has been designed with reliability in mind as we know you need your information in real time, all the time. Redundancy is the technical principle that has guided the evolution of Real Link. Every casino is equipped with a Real Link Server and one server is elected as the primary jackpot manager. Therefore, each Real Link server continuously monitors the existence of the communication paths and promptly reacts to any communication loss. If a communications break is detected, one of the other Real Link servers online will take over as the Primary Jackpot Server. This process is totally transparent and will be recorded in the management reports.

### WIRELESS COMMUNICATIONS

Real Link connected tables means that all communications are encrypted using a highly secure algorithm and can be linked with existing wireless or wired Ethernet infrastructures. With Real Link, you can save the cost associated with the wiring between G3 enabled tables and the Real Link server.

DEQ Systems Corp. is a global provider of gaming technology in over 30 countries. Protected by more than 20 patents in 50 countries, DEQ specializes in progressive and random bonusing systems for table games. DEQ's innovation and ingenuity has been to replace the single dollar coin slot and sensor with its internationally award winning G3™ technology. The G3 incorporates multiple credit betting, dealer hand betting and mystery bonusing. DEQ also commercializes technology and patents including the award winning baccarat revolution, EZ Baccarat™ and related auxiliary products such as EZ Trak™. DEQ is and will continue to lead innovation in the table game bonusing segment of the global gaming market.
